## 1. INTRODUCTION

ICEA, the Institute for Ethical and Environmental Certification (ICEA), together with a group of manufacturers, aimed at producing organic and environmental friendly beauty products, draw up the following Standards, in order to allow the producers interested in this kind of activity to get more information regarding the organic certification and the way to obtain the products label according to the words: "Eco Bio Cosmetics ICEA", and the proper logo as reported in Regulation. Certification and Control procedures will be carried out by an external independent certification body which by means of its technicians, will check the compliance with the standards.

These Standards should be regarded as a mere guideline which is suitable to changes and modifications. In particular, Annex 1 was elaborated according to the European Inventory of cosmetics raw material enclosed in the Decision of the European Commission of February, 9th 2006 (2006/257/EC). Changes to this official inventory lead to subsequent modifications to this Standard. Raw materials not included in the official European inventory will be evaluated by the Technical Commission of the certification body.

## 2. GOALS

ICEA and the above mentioned partners are going to achieve and implement these main goals:

- In body care/treatments: the use of environmental friendly beauty products which take care of the consumers' health. Moreover they should be able to satisfy every particular need through a precise and clear definition of organic, environmental friendly beauty products.
- The Definition of the basic requirements for the products "Eco-BioCosmetics", which are listed in order to give the mark reported in Chapter 2, paragraph V.
- Promote:
  - The use of raw materials of organic farming origin or deriving from spontaneous gathering .
  - The use of beauty products which do not pollute the environment ( dangerous substances contained both in product and packaging).
  - The use of beauty products which do not contain raw materials of non plant origin and could be dangerous i.e. allergic or irritant substances or anyway harmful for the human health.
  - The reduction of the environmental pollution caused by unnecessary packaging (mono packaging) which are not recyclable ( it is advisable to use recycling packaging, recycling material or linked to a returnable/recycling waste)
  - The production is made following the latest environmental friendly methods
  - Cut down of the environmental pollution starting from production
  - The use of really natural beauty products, giving the consumers the possibility to recognise immediately the really natural ones.
  - The creation of a data bank which is used to find the organic raw materials or spontaneous ones at national level.

## 3. CONCEPTS

The selection of the raw materials included in the **list of ingredients not allowed in order to obtain the Environment-friendly Cosmetics Certification** was done taking in account their:

- **compatibilità with the skin**
- **toxicity or undesirable effects**
- **environment impact**
- **synthetic origin**

ICEA	DTR.06	ORGANIC ENVIRONMENTAL FRIENDLY COSMETICS STANDARDS	Ed. 01 Rev.00 del 30.04.09
------	--------	---	----------------------------

In the **list of ingredients not allowed** are included the following type of materials:

- PEG, PPG derivatives (cleansings, emollients, solvents, etc.);
- ethoxylated substances (cleansings, emulsifyings, etc.);
- detergents that are aggressive with the skin;
- substances that can laed to environment damage;
- compounds that can generate nitrosammines (cancerogenc substances);
- animal derivatives as collagen, tallow, placenta, ecc.;
- silicone derivatives;
- acrylic polimers (emulsifyers, viscosity controllers, antistatics, etc.);
- preservatives as formaldehyde, alogenated compounds, thiazolinones, borates;
- synthetic dyes;
- synthetics derivatives of Aluminium and Silicon;

#### **4. APPLICATION FIELD**

The products subject to the Standards are those pertaining to the application sphere of the Law 713/86 as amended.

In the field of application, there are also coadiuvants, ingredients, raw materiale, processing aids, just natural substances that could be used in the cosmetic sector, or that take part of the formula of cosmetic products.

#### **5. STANDARDS REFERENCES**

- Law 713/86 as amended

- Decision of the European Commission on February 2006, 9<sup>th</sup> (2006/257/EC) **I.N.C.I.**

#### **6. RAW MATERIALS**

For each product a form containing a full declaration of the ingredients reported the INCI regulation should be filled in.

The authorisation procedure is carried out when the declaration is being made. In doubtful cases regarding the raw material used in the primary process, the certification body could require further explanations which ensure the harmless and environmental friendly quality of the product.

In order to promote a further customers' safety the producer has the task to communicate in a suitable document the presence of additives in the raw material before its use as for ex: preservatives when they are not reported in the technical form. This will be helpful for the control body in order to check and control the presence of non-stated substances on the basis of the given data of the document.

As regards essential plant oils used as perfumes in cosmetic industry, they can be reported as perfume (according to the law ) , without explaining the nature and percentage except for the producer declaration that these are non- synthetic essential oils. The parfums, essences, fragrances must have a declaration of the supplier that attests the conformity of the parfum to the Annex 1 of this Standard.

## 6.1 Substances

The human being lived and adapted to natural substances since long times so that the natural substances are generally considered not dangerous for the human health.

The processing of raw materials should produce few aggressive products obtained with few chemical processes.

Every certified end product should satisfy the under reported criteria.

## 6.2 Raw material of plant origin

The raw materials of plant origin as plants or part of them, must be of certified organic farming origin or from certified natural gathering.

The organic method of production has to be certified according to a regulated control and certification system (for example according to the EC.Reg 834/07, NOP, JAS, etc) or voluntary, but in that case it has to conform to IFOAM standard and criteria.

Exceptions are allowed and accepted by the Certification Committee of the CB only in case it is not possible to find the certified ingredient on the national market. For each cosmetic product certified according to the present standard, must be included in the ingredients one organic raw material at least. In every case, GMO raw materials or with gamma rays irradiation are forbidden.

Moreover the use of plants is forbidden when the species is endangered; their use is allowed only if these plants are cultivated.

Glycerin of plant origin is allowed.

## 6.3 Raw materials of animal origin

The raw materials of animal origin, must be of certified organic farming origin or from certified natural gathering.

The organic method of production has to be certified according to a regulated control and certification system (for example according to the EC.Reg 834/07, NOP, JAS, etc) or voluntary, but in that case it has to conform to IFOAM standard and criteria.

Exceptions are allowed and accepted by the Certification Committee of the CB only in case it is not possible to find the certified ingredient on the national market.

Raw materials of animal origin are forbidden when animals have to be killed.

Raw materials of bacterial fermentation are allowed.

Glycerin of animal origin is forbidden.

Collagen, keratin, chitosan, chitin, ceramides, elastin, heparin, hyaluronic acid, nucleic acids, enzymes and all their derivatives of animal origin are forbidden.

## 6.4 Inorganic raw materials

Inorganic raw materials are generally admitted, except for those reported in the enclosures. When a cosmetic is composed only by natural, inorganic raw material (for example thermal water, clay, salts, etc.) the Technical Commission of the certification body could give the conformity to this Standard exclusively in order to complete a cosmetic line.

## 6.5 Chemical Raw materials

Raw materials obtained by means of chemical processes are allowed only when there is no other alternative and must satisfy the following criteria:

- the ethoxylation of the raw material is forbidden;

ICEA	DTR.06	ORGANIC ENVIRONMENTAL FRIENDLY COSMETICS STANDARDS	Ed. 01 Rev.00 del 30.04.09
------	--------	---	----------------------------

- chemical UV absorbers are forbidden;
- raw materials included in the substances classes as at point 2 of this Standard and as reported in the enclosures are forbidden (list of substances not allowed in order to obtain the certification);
- in order to complete a certified cosmetic line, the Technical Commission of the certification body could allow the use of "caprylyl glycol" as preservative of the cosmetic product for a maximum concentration of 1%, or etidronic acid only in case of cosmetic products made with basic oils ( solid soaps) for a maximum concentration of 0,15% or the use of 'guar hydroxypropyltrimonium chloride' for a maximum concentration of 1%.

## 6.6 GMO

It is forbidden the use of GMO

The certification body will do special controls on supply chains regarding the use of ingredients coming from raw materials as corn, potatoes and soja and other products with a high GMO contamination risk level.

## 6.7 Irradiation

The use of gamma irradiation in the end product and the use of gamma irradiated ingredients is forbidden for bactericidal and fungicide purposes.

## 7. PACKAGING

For the primary packaging (direct contact with the cosmetic, vials or bowlers etc..) are admitted only recyclable containers for alimentary use . Packaging material harmful for human health and material that can realase monomer harmful for environment are forbidden.

For the secondary packaging, is required a reduced and environmental friendly packaging above all from natural recyclable raw materials , which respect the natural environment

The packaging material should be reduced , except when it is strictly necessary because of the product's features: for ex it is admitted cartoon box for a bottle provided with a dropper cap in order to easier the storing operation both in production phase and during selling to consumer.

The materials reported in enclosure II are forbidden.

All packaging materials must be evaluated and approved by the Technical Commision of the Certification Body according the concepts of this point.

Some examples of correct application of these principles are the following:

- label and cap will be made of the same material of the flacon in order to do a corret recyclation;
- spray devices will be made of one material;
- in case of products that have, in the container, the spray device or the dispenser, (having for example metal components), it's desirable to trade those products also in the refill version and invite the consumer, through visible claims in the label, to use the spray dispenser as much as possible. The presence of metal infact forbids a proper recycling.

## 8. LABELLING

It's hoped to indicate on the label the organic raw materials ingredients and their percentage on the total, for a higher consciousness and information of the consumer.

Labels must contain, where possible, enough indications which help the consumer to recognise the ingredient and to allow the right interpretation (es: "decyl glucoside", in the translation which follows or anticipate the complete INCI declaration, is "suface-active agent", "potassium sorbate" is translated as "preservative substance").

The label should be readable, especially for the part concerning the ingredients. When it is

ICEA	DTR.06	ORGANIC ENVIRONMENTAL FRIENDLY COSMETICS STANDARDS	Ed. 01 Rev.00 del 30.04.09
------	--------	---	----------------------------

not possible to specify these ingredients in label, it is advisable to hand out information material.

All the packaging and the information materials concerning certified products will put on logos and wording as conform to this Standard and will be evaluated by the Commission for Certification. Products which obtained the quality mark without being duly certified must be withdrawn from the market at the producer's expenses.

## 9. MARK

The mark "EcoBioCosmetics" is granted to:

- Products which satisfy the requirements of these standards and are part of a line of certified products.
- In case the cosmetic industry produces non – certified/ conventional beauty products too, the bio-environmental friendly cosmetic line should be provided with a commercial mark and a graphic packaging which is different from the non certified product, so that the consumer is able to recognise immediately the certified product from the conventional one.

However, in case the commercial mark is the same of the producers' name, it is possible to keep the same commercial mark but the certified line should be immediately recognisable by the consumer in comparison to the non-certified products.

## 10. ATTACHMENTS

The application field of the standards will be periodically updated and also the list of the not allowed raw materials.

This list was elaborated according to the European Inventory of cosmetics raw material enclosed in the Decision of the European Commission of February, 9th 2006 (2006/257/EC). Raw materials not included in the official European inventory will be evaluated by the Technical Commission of the certification body according to the principles as at point 3 of this Standard.
